**Subject:** toxic waste

I am writing in reference to the 500,000 tons of toxic waste that threatens the health of humans, animals, vegetation and waterways. It is imperative that this toxic waste dump be removed by whatever means. It is also imperative the DuPont own up to the pollution that they have contributed and continue to contribute to. It is everyones responsibility to protect this earth and to try to reverse what has happened to it. We know the lethal effects and the destruction is still occurring. Why?

We need this pile removed and I am one of many who are requesting a public hearing in order to hear the Scnaebel report and have a say in what is happening to our world.

Thank you
